-!- FUNCTION: INVOLVED IN A PEPTIDE INTAKE TRANSPORT SYSTEM THAT PLAYS A ROLE IN THE RESISTANCE TO ANTIMICROBIAL PEPTIDES.
-!- SUBCELLULAR LOCATION: Inner membrane-associated (Potential).
-!- SIMILARITY: Belongs to the ABC transporter family.

- CATALYTIC ACTIVITY: ATP + N-acetyl-D-mannosamine = ADP + N-acetyl-
                                                                                                                                                                                                                                                                                                                                                                                                                                    D-mannosamine 6-phosphate.

PATHWAY: N-acetylmannosamine utilization.

PATHWAY: N-acetylmannosamine ocid (sialic acid)

PATHWAY: N-acetylmeuraminic acid (sialic acid)

SIMILARITY: Belongs to the ROK (sugar kinases)
                                                                                                                                                                                                                                                                                                                                                                                                                          subfamily.

-!- FUNCTION: Stabilizes TBP binding to an archaeal box-A promoter. Also responsible for recruiting RNA polymerase II to the pre-initiation complex (DNA-TBP-TFIIB) (By similarity).

-!- COFACTOR: Binds 1 zinc ion per subunit (By similarity).

-!- SIMILARITY: Belongs to the TFIIB family.
                                                                                                                                                                                                                                                                                                                SEQUENCE FROM N.A.

US-09-815-242-11067, Application US/09815242
Sequence 11067, Application US/09815242
Patent No. US20020661569A1
GENERAL INFORMATION:
APPLICANT: Haselbeck, Robert
APPLICANT: Cyskind, Judith W.
APPLICANT: Zyskind, Judith W.
APPLICANT: Wall, Daniel
APPLICANT: Wall, Daniel
APPLICANT: Wall, Daniel
APPLICANT: Xu, H. Howard
ITITLE OF INVENTION: Identification of Essential Genes in TITLE OF INVENTION: Prokaryotes
FILE REFERENCE: ELITRA.011A
CURRENT APPLICATION NUMBER: 60/191,078
PRIOR APPLICATION NUMBER: 60/191,078
PRIOR APPLICATION NUMBER: 60/207,727
